According to our (Global Info Research) latest study, the global Metal Material Based 3D Printing market size was valued at US\$ 1091 million in 2024 and is forecast to a readjusted size of USD 5010 million by 2031 with a CAGR of 24.6% during review period.

Metal 3D printing processes be used to manufacture complex, bespoke parts with geometries that traditional manufacturing methods are unable to produce.

Metal 3D printed parts can be topologically optimized to maximize their performance while minimizing their weight and the total number of components in an assembly.

Metal 3D printed parts have excellent physical properties and the available material range includes difficult to process otherwise materials, such as metal superalloys.

The material and manufacturing costs connected with metal 3D printing is high, so these technologies are not suitable for parts that can be easily manufactured with traditional methods.

Global Metal Material Based 3D Printing main players are Sandvik, Carpenter Technology, Arcam AB, Hoganas, etc. Global top four manufacturers hold a share over 40%. Europe is the largest market, with a share nearly 70%.
