According to our (Global Info Research) latest study, the global Metal Membrane Switch market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Metal membrane switch refers to a structural product that uses PET film as a circuit pattern carrier and is mounted with metal spring sheets. It is used as a switch on circuit boards such as PCB or FPC. With the help of the conductivity of the metal spring, it plays the role of a high-quality tactile switch between the operator and the product. The working principle of the metal membrane switch is: when the metal membrane switch is pressed, the elastic piece deforms downward and contacts the lower plate to conduct electricity; after the pressure on the elastic piece disappears, the elastic piece returns to its original shape and no longer contacts the lower plate, and the circuit is broken. open. The metal membrane switch has the advantages of small size, thinness, short stroke, good mechanical life, easy installation, and thinness.
