The metal mesh sleeve composite compensator is a compensation device used in the pipeline system. The structure is composed of a metal mesh sleeve and rubber or polymer materials. It mainly realizes the compensation function of the pipeline system through the rigidity of the metal mesh sleeve and the flexibility of the elastic material.

The main features of the metal mesh sleeve composite compensator include: pressure resistance, good flexibility and displacement resistance, corrosion resistance, temperature resistance, simple structure, easy installation and maintenance. When selecting and using a metal mesh composite compensator, it is necessary to select the appropriate model and specification based on the working condition parameters, medium characteristics and compensation needs of the pipeline system, and install and maintain it in accordance with the instructions for use.
