According to our (Global Info Research) latest study, the global Metal Meshes for Architecture market size was valued at US\$ 350 million in 2025 and is forecast to a readjusted size of US\$ 518 million by 2032 with a CAGR of 5.8% during review period.

Architectural metal mesh is a type of metal material used for architectural decoration, functional, and structural applications. It combines aesthetics, ventilation, sun shading, and safety, while also possessing durability and corrosion resistance. It is commonly used in building facades, partitions, ceilings, railings, and cladding. Materials, mesh patterns, thicknesses, and surface treatments can be customized according to architectural and design requirements. The industrial chain of architectural metal mesh includes upstream raw materials such as stainless steel, aluminum, and copper, as well as surface treatment materials. The midstream encompasses weaving, punching, surface treatment, cutting, and quality inspection. Downstream applications cover commercial and residential buildings, hotels, airports, public infrastructure, and interior design projects. Supporting services include installation, maintenance, design consulting, and customization services to ensure performance, aesthetics, and compliance with building codes. In 2025, the global production of architectural metal mesh was approximately 24.3 million square meters, with a global average market price of approximately US\$14 per square meter. The gross profit margin of major companies in the industry ranged from 25% to 40%. In 2025, the global production capacity of architectural metal mesh was approximately 29.16 million square meters.
