Abstracts

The global Metal Modification Services market size is expected to reach \$ 3670 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

To address the problems of low production efficiency, high product costs, and insufficient market competitiveness caused by the large weight, high cost, and complex processing of traditional metal parts, metal modification services have emerged. Since the breakthroughs in polymer materials technology and the rise of green manufacturing concepts in the early 21st century, the application of lightweight materials has undergone a revolution. Currently, metal modification services have developed into a comprehensive service encompassing multiple technical paths, including injection molding modification, 3D printing composite materials, and surface plasticizing treatments, and are widely used in automotive lightweight components, consumer electronics casings, industrial equipment components, and medical device manufacturing.
