## Abstracts

According to our (Global Info Research) latest study, the global Metal Orthodontic Appliance market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Orthodontics is the specialty of dental technology that is concerned with the design and manufacture of dental appliances used to treat malocclusions that may result from irregular teeth, disproportionate jaw relationships, or both. There are three main types of orthodontic appliances: active, passive, and functional. All of these types can be fixed or movable. Metalodontic appliances, commonly known as traditional braces, continue to be widely used in orthodontic treatments.

Although metal braces have been around for decades, ongoing technological advancements have improved their design, comfort, and effectiveness. Manufacturers are investing in research and development to develop smaller, more comfortable brackets, and advanced wire materials that can enhance tooth movement and reduce treatment time. The demand for customized and personalized orthodontic treatments is growing. Metal braces are now available in various bracket shapes, sizes, and colors, allowing patients to choose options that suit their preferences and aesthetic concerns. This customization enhances patient satisfaction and improves treatment outcomes. While newer orthodontic treatment options gain popularity, metal braces still hold a significant share in the orthodontic appliance market due to their effectiveness, affordability, and ongoing advancements. Clinical advancements, customization, and expanding markets contribute to the continued growth and relevance of metal orthodontic appliances in modern orthodontic practices.
