According to our (Global Info Research) latest study, the global Metal Oxide Semiconductor Circuit market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

A metal oxide semiconductor circuit (MOS) sensor is a type of image sensor.

Image sensors, also called image pickup elements, are components used in digital cameras to convert light entering through the lens into electrical signals.

Types of image sensors include metal oxide semiconductor circuit, complementary MOS (CMOS), and charged coupled device (CCD) sensors. Currently, CCD sensors with high performance and CMOS sensors with low power consumption and low cost are the mainstream. Metal oxide semiconductor circuit, the earliest image sensor to be developed and mass-produced, disappeared for a time in favor of CCD and CMOS sensors, but new metal oxide sensors have appeared in recent years and are once again attracting attention.

The MOS circuit market has witnessed significant growth in recent years due to the increasing demand for electronic devices and advancements in semiconductor technology. The market size is expected to expand further as the adoption of MOS circuits continues to rise in various applications such as consumer electronics, automotive, industrial automation, and telecommunications.

Regions such as North America, Europe, Asia Pacific, and Latin America are major contributors to the MOS circuit market. Factors such as economic growth, technological
