Abstracts

The demand for metal pipeline monitoring systems can be attributed to high growth due to natural disasters and high pressures, increased oil and gas leaks in pipelines and storage tanks, coupled with strict government regulations on pipeline safety and security and pipeline expansion and upgrades. The development trend of new equipment and solutions for monitoring pipeline performance, optimizing resources, automating functions, and protecting operations has led to the development of pipeline monitoring systems. Compared to ordinary pipes, metal pipes have higher strength and durability, so it is preferred over other types of pipes, regardless of the liquid they carry. This increase can be attributed to the high-pressure bearing strength of any material it transports through metal pipes.
