According to our (Global Info Research) latest study, the global Metal Plate Heat Exchanger market size was valued at USD 550.1 million in 2023 and is forecast to a readjusted size of USD 724.8 million by 2030 with a CAGR of 4.0% during review period.

A plate heat exchanger is a type of heat exchanger that uses metal plates to transfer heat between two fluids. This has a major advantage over a conventional heat exchanger in that the fluids are exposed to a much larger surface area because the fluids are spread out over the plates. This facilitates the transfer of heat, and greatly increases the speed of the temperature change.
