## Abstracts

The metal powder flow tester is an instrument used to evaluate the flow properties of metal powders. It usually uses methods such as the flow cone method (flow funnel method) or the flow box method (Hope sliding funnel method) to measure the flow properties of metal powder under specific conditions. These tests typically involve passing a metal powder through a specific orifice or channel and then measuring the time or velocity of its passage to evaluate its flow properties. The flow properties of metal powder are of great significance to processes such as powder metallurgy, metal injection molding, and 3D printing, so metal powder flow testers are widely used in these fields.

According to our (Global Info Research) latest study, the global Metal Powder Flow Tester market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
