Abstracts

The global Metal Powder Injection Molding (MIM) market size is expected to reach \$ 7678.7 million by 2029, rising at a market growth of 10.2% CAGR during the forecast period (2023-2029).

Global top manufacturers of metal powder injection molding (MIM) include Indo-Mim, OptiMIM (Form Technologies), ARC Group, Ecrimesa Group, Smith Metal Products, Netshape Technologies (MPP) and Uneec, etc. Indo-Mim, as the largest player, makes up about 5%.

China is the largest producer of metal powder injection molding, with a production market share over 50%. And China also holds the highest revenue market share over 40%.

Major product types of MIM include stainless steel, iron powder, magnetic alloys and copper, etc. Stainless steel is the largest segment, with a share nearly 60%.

MIM is widely used in electronic, automotive, industrial components, medical & dental and firearms, etc. The largest segment is electronic, with a share over 40%.

Metal Powder injection molding (MIM) is a metalworking process in which finely-powdered metal is mixed with binder material to create a 'feedstock' that is then shaped and solidified using injection molding. The molding process allows high volume, complex parts to be shaped in a single step. After molding, the part undergoes conditioning operations to remove the binder and densify the powders. Finished products are small components used in many industries and applications.
