The global Metal Recycling Devices market size is expected to reach \$ 2308 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Metal recycling devices are machines, tools, and automated systems designed to collect, sort, process, and recover metals from scrap and waste materials. They include shredders, crushers, balers, separators, and advanced sorting systems that help convert discarded metal into reusable raw materials. These devices play a key role in sustainable metal recovery by improving material purity and reducing energy consumption compared with primary metal production. In 2025, global Metal Recycling Devices production reached approximately 688 k units, with an average global market price of around 2445 USD/unit. The production capacity for Metal Recycling Devices in 2025 was approximately 1000 k units. The typical gross profit margin for Metal Recycling Devices between 20% and 40%.

The Metal Recycling Devices market refers to the global industry for machines and systems used in recovering and processing metal waste. This market includes equipment such as shredders, balers, separators, and other specialized machines that enable efficient recycling of ferrous and non-ferrous metals. Driven by sustainability goals, rising metal waste volumes, regulatory pressures, and advances in automation and digital technologies, the market is expanding as industries seek cost-effective and environmentally responsible recycling solutions.
