Abstracts

The global Metal Scavenger market size is expected to reach \$ 26 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Global key players of metal scavenger include SiliCycle, Johnson Matthey, BASF Catalysts, Thermo Scientific, Sigma-Aldrich (Merck), etc. The top five players hold a share over 60%. Asia-Pacific is the largest market, has a share about 43%, followed by Europe, and North America, with share 27% and 19%, separately. Europe is the largest producer, has a share about 62%, followed by North America, with share 21%. In terms of product type, silicone-based metal scavenger is the largest segment, occupied for a share of 64%, and in terms of application, pharmaceutical has a share about 53 percent.

Metal scavengers are different types of functional chemicals based on aluminium, carbon and silicon bases. Designed to react and bind excess metal complexes, among them aluminium-based metal scavengers that remove oxygen from hydrocarbon streams (e.g. ethylene). Carbon-based metal scavengers, on the other hand, are carbon-based powders suitable for the removal of dissolved metal species from organic reaction mixtures. Silica-based metal scavengers refer to functionalised silica designed for the extraction of metal contaminants from organic and aqueous systems. Suitable for batch and continuous processing applications. Ideal for R&D applications as they have extremely fast removal capabilities and are easily separated by filtration.
