Abstracts

The global Metal-Scavenging Agents market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Metal-Scavenging Agents are different types of functional chemicals based on aluminium, carbon and silicon bases. Designed to react and bind excess metal complexes, among them aluminium-based Metal Scavengers that remove oxygen from hydrocarbon streams (e.g. ethylene). Carbon-based Metal Scavengers, on the other hand, are carbon-based powders suitable for the removal of dissolved metal species from organic reaction mixtures. Silica-based Metal Scavengers refer to functionalised silica designed for the extraction of metal contaminants from organic and aqueous systems. Suitable for batch and continuous processing applications. Ideal for R&D applications as they have extremely fast removal capabilities and are easily separated by filtration.
