Abstracts

The global Metal Surface PU Sandwich Panel market size is expected to reach \$ 7017 million by 2032, rising at a market growth of 7.5% CAGR during the forecast period (2026-2032).

Metal Surface PU Sandwich Panel refers to a prefabricated insulated composite panel consisting of two metal facings and a rigid polyurethane foam core bonded together into an integrated sandwich structure. The metal surfaces are usually color-coated steel, galvanized steel, aluminum-zinc coated steel, stainless steel or aluminum sheets, while the core material is polyurethane rigid foam formed through continuous or discontinuous foaming and lamination. These panels provide high thermal insulation, light weight, fast installation, good structural rigidity and moisture resistance for building envelope applications. In this report, the market mainly includes PU wall sandwich panels, PU roof sandwich panels, cold-room PU panels, cleanroom PU panels, industrial PU envelope panels, refrigerated warehouse PU panels, metal-faced PU insulation panels and customized PU sandwich panels. The 2025 benchmark ASP is US\$20.00 / m², shipment volume is 205.00 million m², and average gross margin is 27%. The upstream industry chain includes color-coated steel coils, galvanized steel coils, aluminum-zinc steel sheets, stainless steel sheets, polyols, MDI, blowing agents, catalysts, flame retardants, adhesives, sealants, protective films, coatings and fasteners. The midstream includes steel coil profiling, PU foaming, continuous lamination, discontinuous panel production, curing, cutting, edge sealing, tongue-and-groove forming, surface protection, dimensional inspection, thermal testing, fire testing and packaging. The downstream includes cold storage facilities, refrigerated warehouses, food processing plants, industrial buildings, logistics centers, cleanrooms, modular buildings, commercial buildings, agricultural buildings, building envelope contractors and steel-structure engineering companies.

Metal surface PU sandwich panels are widely used because polyurethane rigid foam provides strong thermal insulation performance at relatively low thickness and weight. This makes PU panels especially suitable for cold storage, refrigerated logistics, food processing, industrial buildings, cleanrooms and temperature-controlled building envelopes. Compared with EPS panels, PU panels generally provide better insulation and mechanical performance; compared with rock wool panels, PU panels are lighter and have lower thermal conductivity; compared with PIR panels, PU panels are often more cost-competitive but usually have weaker fire performance. Market demand is driven by cold-chain logistics, food safety infrastructure, industrial parks, prefabricated buildings, warehouse construction, energy-efficient building envelopes and replacement of traditional on-site insulation systems. However, the market is constrained by fire safety requirements, raw material price volatility in MDI and polyols, environmental pressure on blowing agents, quality variation in low-end products and competition from PIR and rock wool panels in fire-rated applications. Future product development will focus on better flame retardancy, lower thermal conductivity, improved dimensional stability, continuous production efficiency, hidden-fixing systems, airtight joints, cold-room anti-condensation performance, low-GWP blowing agents and recyclable metal-faced insulated panel systems.
