A metal trackball is a computer input device characterized primarily by its metal casing, which is made of materials such as stainless steel or aluminum alloy. The main components consist of a trackball, buttons, and internal circuitry. The trackball is a scrollable sphere, partially exposed on the surface of the device, and users control the movement direction of the cursor on the screen by rotating this sphere with their fingers or palms. The button section is used to perform operations such as clicking and selecting, similar to the functions of mouse buttons. Metal trackballs can provide smooth and accurate cursor control in wet, dirty, or harsh environments.
