The global Metal Tube Rotameter for Food market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A Metal Tube Rotameter for Food is a specialized flow meter used in the food industry to measure the flow rate of liquids or gases in food processing or manufacturing applications. It is specifically designed to meet the sanitary and hygienic standards required for food processing, ensuring that the meter does not contaminate the food being measured. This flow meter consists of a metal tube with a float that rises or falls within the tube, indicating the flow rate. The metal tube construction offers durability and resistance to corrosive substances commonly found in food processing environments, making it suitable for accurate and reliable flow measurement in the food industry.
