Abstracts

According to our (Global Info Research) latest study, the global Metal VCI Film market size was valued at US$ 3479 million in 2025 and is forecast to a readjusted size of US$ 4625 million by 2032 with a CAGR of 4.2% during review period.

Metal VCI films are clear films comprising transparent and volatile corrosion inhibitor molecules that assist in protecting metal surfaces from external factors, such as corrosion.

Hectic lifestyle and increasing consumption of packaged food are expected to drive the demand for plastic packaging materials such as plastic shrink wrap over the next decade. Plastic films are used in various industrial and commercial applications due to their strong strength and high tear resistance. In addition, industries such as packaging, packaging individual products, bundling, e-commerce, logistics, and food and beverage packaging will widely use PVC shrink bags during the evaluation period. Increase in consumption of packaged food and pharmaceuticals is also likely to create a large demand for shrink packaging systems. Due to significant changes in lifestyle, the demand for packaged food has increased. Rising demand for packaged food is further driving the demand for plastic shrink packaging across industries. In addition, plastic shrink wrap made of polyolefin can make it recyclable, and companies can easily print information on it. The easy availability of biodegradable plastics is another key factor driving the market growth. Shrink wraps are also cost-effective compared to other packaging materials as they require less energy and resources in the manufacturing process. The urgent need for sustainability and durability has increased the demand for plastic shrink wrap.
