The global Metallic Alloys Soft Magnetic Material market size is expected to reach $ 49300 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global Metallic Alloys Soft Magnetic Material production reached approximately 7,000 K tons, with an average global market price of around 4,500 US$/ton.

Metallic Alloys Soft Magnetic Material refers to metal-based magnetic materials that can be easily magnetized and demagnetized under an external magnetic field, while maintaining low coercivity, high magnetic permeability, low core loss, and good magnetic flux response. Typical materials include silicon steel, Fe-Ni alloys, Fe-Co alloys, Fe-Si alloys, amorphous alloys, nanocrystalline alloys, and metallic soft magnetic powders. Compared with ferrite materials, metallic soft magnetic alloys usually offer higher saturation magnetic flux density, better mechanical strength, higher power density, and stronger suitability for motors, transformers, inductors, electromagnetic shielding, sensors, relays, and high-frequency power conversion systems. They are widely used in electric vehicles, industrial motors, power grids, renewable energy equipment, consumer electronics, aerospace, medical devices, and precision electromagnetic components.

Demand for Metallic Alloys Soft Magnetic Material is being driven by electrification, high-efficiency power conversion, miniaturization of electronic devices, and the rapid expansion of EVs, renewable energy, data centers, industrial automation, and smart grid infrastructure. Electrical steel remains the largest-volume segment because motors and transformers continue to require low-loss magnetic core materials, while amorphous and nanocrystalline alloys are gaining opportunities in high-frequency

transformers, current sensors, EMC components, wireless charging, and compact power modules. Fe-Ni and Fe-Co soft magnetic alloys serve higher-value niches such as aerospace, defense, magnetic shielding, medical electronics, and precision control systems. Business opportunities are concentrated in low-loss alloy design, thinner strip processing, high-saturation materials for EV motors, high-frequency soft magnetic powder cores, localized supply chains, and customized magnetic materials for power electronics manufacturers.
