According to our (Global Info Research) latest study, the global Metallic Guide Wires market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The metal guide wire is a slender and soft medical device made of high-strength metal materials (such as stainless steel, nickel-titanium alloy, etc.). It has good anti-bending performance, stability and controllability, can easily pass through narrow blood vessels or nerve channels, and accurately guide other medical devices to the target location. Metal guide wires are widely used in the medical field, especially in the guidance and positioning of cardiovascular, neurosurgery, oncology and other surgeries. For example, in coronary angiography, the guide wire can accurately expose the coronary artery ostium and guide medical devices such as balloons and stents into the coronary artery; in pacemaker implantation, the guide wire can guide the pacemaker catheter to the appropriate part of the heart and fix the pacemaker on the endocardium or epicardium.
