The global Metallic Soaps market size is expected to reach \$ 3777.2 million by 2029, rising at a market growth of 4.5% CAGR during the forecast period (2023-2029).

Baerlocher is the largest manufacturers of Metallic Soaps in the world, has a share about 10%. Other players include FACI SPA, Dover Chemical, CHNV Technology, etc. China is the largest production region, has a share about 30%, followed by Europe and Southeast Asia, with share about 22% and 19%, separately. In terms of product type, zinc soaps are the largest segment, with a share about 33%. In terms of product application, the largest application is plastics industry, with a share nearly 30%, followed by rubber industry and pharmaceuticals.

Metallic Soaps (Metal Stearates) are derived from long-chain fatty acids and a metal oxide compound. Stearates are salts or esters of stearic acid. Stearates have both hydrophilic and hydrophobic regions, allowing them to serve as surfactants, and are frequently produced during saponification processes, in which soaps are produced by treating fats with strong bases. Most commonly, the base used is sodium hydroxide or potassium hydroxide, which leads to the production of sodium or potassium stearates. Sodium stearate is found in many types of deodorants, rubbers, paints, and inks. Magnesium and calcium stearates are frequently used as an anti-adherent agent in pharmaceutical manufacturing. Zinc stearate is often referred to as a “zinc soap”, and has many important industrial uses.
