## Abstracts

According to our (Global Info Research) latest study, the global Metallocene Ultra Clear Polypropylene market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Compared with ordinary transparent polypropylene, metallocene catalyst technology can push the transparency of polypropylene to a new height. The haze of 1mm plate can be reduced from 9 to 3~4. In addition, metallocene super transparent polypropylene can still maintain good transparency in thick parts, so it gives more space in product design and application. Ultra-high transparent metallocene polypropylene also has the characteristics of high gloss, good temperature resistance, and low precipitated matter.

Metallocene ultra-transparent polypropylene is a polypropylene synthesized by metallocene catalyst, which has the characteristics of high gloss, good temperature resistance and low precipitates. At present, it mainly focuses on the fields of spinning and non-woven fabrics, injection molded products and films.
