According to our (Global Info Research) latest study, the global Metallurgical Silicon (MG-Si) market size was valued at USD 6789 million in 2023 and is forecast to a readjusted size of USD 9178.6 million by 2030 with a CAGR of 4.4% during review period.

As metallurgical grade silicon is used in the manufacture of solar cells, the growth of solar cell installations will help in boosting the sales of metallurgical grade silicon.

The rising application of silicon in chemical and manufacturing industries will aid in expansion of the global metallurgical grade silicon market during the forecast period, 2023-2029. Metallurgical Silicon (MG-Si) has a wide application range in the semiconductor business and is additionally purged for applications in the sunlight based industry. Polysilicon, which is a vital material in the assembling of sunlight based cells, utilizes refined metallurgical evaluation silicon as a crude material. Polysilicon is additionally utilized in the assembling of different microelectronic gadgets. Electronic evaluation polysilicon is produced using a cleaner type of metallurgical silicon than that utilized in the production of sunlight based evaluation polysilicon. Thus, these wide scopes of use and application of metallurgical grade silicon will support market growth over the coming years.
