Abstracts

The global Metals Recovery Services market size is expected to reach \$ 255017 million by 2032, rising at a market growth of 3.5% CAGR during the forecast period (2026-2032).

Metals Recovery Services refer to the professional services provided by service providers that extract and refine economically valuable metals from metal-containing waste, industrial by-products, waste liquids, scrapped products, and other secondary resources through processes such as collection and transportation, dismantling, crushing and sorting, sampling and testing, pyrometallurgy, hydrometallurgy, electrolytic refining, and chemical separation, and then reintroduce them into the supply chain in the form of metal ingots, metal salts, alloys, powders, precursors, or remanufactured materials.

A typical service chain includes:

Waste collection ? Safe transportation ? Pre-treatment ? Sampling and composition analysis ? Metal enrichment ? Separation and extraction ? Refining and purification ? Metal settlement or closed-loop return.

Service providers typically employ business models such as direct waste procurement, contract processing or toll refining, metal account settlement, refined metal return, and recycled product return. For example, TANAKA defines its services as an integrated system from precious metal waste recycling and refining to remanufacturing; Umicore provides services such as contract refining, metal accounts, physical return, and metal transfer.
