Communication network refers to the physical connection of isolated devices, which enables information exchange between people, computers, and computers, in order to achieve resource sharing and communication. The creation of a metaverse environment has strict requirements for communication and computing. In addition to meeting the needs of millions of users and content creators simultaneously, providing an immersive user experience and real-time interaction also requires minimum guarantees in terms of latency, data rate, and computing resources. The current computing and communication infrastructure is not yet ready for mature Metaverse deployment. Metaverse can be seen as an opportunity for operators to stand out as a driving force for upcoming technologies. The work of upgrading the current 5G network to achieve the final arrival of the 6G network around 2030 should be fully in line with the time frame for large-scale deployment of metaverse applications. The current arms race for 5G sovereignty may evolve into a race to lead the driving force of metaverse solutions.
