Abstracts

The global Metaverse Rental Space Services market size is expected to reach \$ 1983 million by 2032, rising at a market growth of 9.8% CAGR during the forecast period (2026-2032).

Metaverse rental space services offer digitally rentable land, buildings, shops, or event venues within the Metaverse, using virtual reality (VR), augmented reality (AR), or blockchain technology. These services are available to businesses, individuals, or institutions for brand display, social events, business operations, or entertainment. These services typically leverage decentralized virtual platforms or enterprise-level Metaverse solutions, supporting NFT ownership confirmation, smart contract transactions, and customized development.

Metaverse's rental services are rapidly expanding with the development of virtual reality, Web3.0, and digital twin technologies. In the future, it will not only serve the needs of businesses such as online meetings and virtual exhibitions, but will also deeply integrate with brand marketing, online education, and entertainment and social networking, forming a 'virtual real estate economy.' With improved cross-platform interoperability and immersive experiences, the rental model may gradually replace some property sales, becoming the mainstream, low-barrier-to-entry method of participation. Its core value will shift from the space itself to the community, data, and service ecosystem it supports, becoming an important bridge connecting reality and digital commerce.
