Meteorological instruments (or weather instruments), including meteorological sensors (weather sensors), are the equipment used to find the state of the atmosphere at a given time.

There are various types of meteorological devices used to measure and monitor weather conditions. Some common types of meteorological devices include:

? Thermometer: Measures temperature, typically using a mercury or digital sensor.

? Barometer: Measures atmospheric pressure, indicating changes in weather patterns.

? Anemometer: Measures wind speed and direction.

? Hygrometer: Measures humidity levels in the air.

? Rain Gauge: Measures the amount of rainfall in a given area over a period of time.

? Pyranometer: Measures solar radiation, including both direct and diffuse sunlight.

? Weather Balloon: Carries instruments such as radiosondes to collect data about temperature, humidity, pressure, and wind at different altitudes.

? Weather Radar: Uses radio waves to detect precipitation, measure its intensity, and track its movement.

? Weather Station: A complete set of instruments that includes various sensors for measuring temperature, humidity, pressure, wind speed and direction, and sometimes additional parameters like UV index and precipitation.
