According to our (Global Info Research) latest study, the global Meter Concentrator Module market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The concentrator is the key equipment of the centralized meter reading system. The downstream uses RS-485 and M-Bus bus interfaces as data links to automatically collect and store the power data of various smart meters with carrier communication functions, acquisition terminals or acquisition modules, and various carrier communication terminals, and collect external 485 electricity meters. Data; at the same time, data is exchanged with the main station or handheld device through uplink communication. As a hub device connected to the master station system, the concentrator has two main tasks: one is to issue commands to the collector and receive the power data of the collector; the other is to communicate with the master station according to the system requirements and provide the user information required by the master station. Electrical data and other information are transmitted to the main station database.
