This market consists of utilities seeking products for managing metered consumption data. Metered data managed in these products can be used across the enterprise and shared with customers, partners, market operators and regulators. For the purpose of this market assessment, meter data management (MDM) products are IT components of the advanced metering infrastructure (AMI). These products are responsible for cleansing, calculating, providing data persistency, and disseminating consumption and event data obtained from meters installed on delivery points. MDM products can contain a subset of meter asset information, or even some premise, topology or customer information. However, the key data being tracked is metered commodity consumption and meter-related events, regardless of the type of commodity metered, type of meter, communication technology or collection device.
