## Abstracts

The global Methacrylic Acid and Ethyl Acrylate Copolymer Dispersion market size is expected to reach \$ 87.73 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Methacrylic Acid?Ethyl Acrylate Copolymer Aqueous Dispersion is a pharmaceutical excipient appearing as a white or off-white, slightly viscous liquid. This substance is an anionic copolymer based on methacrylic acid units; characterized by its solubility in intestinal fluid and insolubility in gastric fluid, it is frequently employed as an enteric film-forming agent and sustained-release coating material for tablets or pellets.

The core upstream raw materials are methacrylic acid (MAA) and ethyl acrylate (EA), the prices of which are directly influenced by fluctuations in the crude oil and petrochemical refining industries; the production process also involves the use of emulsifiers and initiators. The midstream segment consists of technology-intensive polymer manufacturing, with emulsion polymerization serving as the core process. Downstream applications are highly concentrated within the pharmaceutical industry, where the material is utilized as an enteric coating agent. Driven by environmental regulations restricting volatile organic compound (VOC) emissions, this eco-friendly excipient?which utilizes water as a dispersion medium?is rapidly displacing traditional organic solvent-based resins on a large scale, thereby underpinning the rapid growth of gastrointestinal medications and sustained/controlled-release drug formulations.

In 2025, global sales volume is projected to reach approximately 11,000 tons, with an average selling price of around \$5,850 per ton. The industry's gross profit margin hovers in the vicinity of 30%.
