According to our (Global Info Research) latest study, the global Methane Hydrate Extraction market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Methane clathrate ($\text{CH}_4 \cdot 5.75\text{H}_2\text{O}$) or ($4\text{CH}_4 \cdot 23\text{H}_2\text{O}$), also called methane hydrate, hydromethane, methane ice, fire ice, natural gas hydrate, or gas hydrate, is a solid clathrate compound (more specifically, a clathrate hydrate) in which a large amount of methane is trapped within a crystal structure of water, forming a solid similar to ice.

Methane clathrate ($\text{CH}_4 \cdot 5.75\text{H}_2\text{O}$) or ($4\text{CH}_4 \cdot 23\text{H}_2\text{O}$), also called methane hydrate, hydromethane, methane ice, fire ice, natural gas hydrate, or gas hydrate, is a solid clathrate compound (more specifically, a clathrate hydrate) in which a large amount of methane is trapped within a crystal structure of water, forming a solid similar to ice. The methane hydrate extraction market is at a nascent stage as their extraction process is not yet commercialized. Some of the factors expected to drive the growth of this market include greater availability, rise in investments for the process of extraction, and several government initiatives to accelerate the extraction process to meet the growth in demand for energy. Methane hydrate releases larger amount of natural gas, which is expected to be used as a future source of energy. Countries such as China and Japan have already successfully extracted methane hydrate after conducting two tests.
