According to our (Global Info Research) latest study, the global Methane Monitor market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

The methane monitor is a portable safety instrument, mainly used as a gas alarm device for continuous 24-hour detection of methane (gas).

When the methane detector detects that the concentration of methane gas in the environment exceeds the set alarm value, it will sound an audible and visual alarm to remind on-site staff to take safety measures. In addition, the methane detector also has the characteristics of strong anti-interference ability, digital display of concentration values, and the ability to monitor the site at any time.
