Abstracts

The global Methanol for Chromatography market size is expected to reach \$ 715 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Methanol for chromatography is a methanol reagent used for chromatographic analysis, chromatographic separation, and chromatographic preparation. Methanol for chromatography generally refers to a special solvent or reagent for chromatography, which has better light transmittance at low wavelengths.

Chromatographic grade methanol is mainly produced by multi-stage distillation to remove impurities. It conforms to HPLC standards, requiring a water content of less than 0.05% and a UV absorbance value meeting specified thresholds.

Pharmaceutical manufacturing is the primary source of demand for chromatographic-grade methanol. Methanol, as one of the most commonly used organic mobile phases in reversed-phase HPLC and LC-MS, is widely used in API purity detection, impurity profile analysis, degradation product analysis, stability studies, dissolution method development, and pharmacopoeia method validation.

This report studies the global Methanol for Chromatography production, demand, key manufacturers, and key regions.
