According to our (Global Info Research) latest study, the global Methanol Cracking Plants market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Methanol Cracking is an extremely useful technology being used to generate Hydrogen at a low cost. This is because Methanol is considered as a preferred raw material in view of its easy availability and storage features. In this process, methanol and demineralised water are mixed, preheated, evaporated, superheated. Then, the mixed superheated gasses undergo a catalytic process. After that, the present Carbon monoxide shifts to form a mixture of Hydrogen, Carbon dioxide, and other residues. Lastly, the mixture of gasses is transferred to the PSA section to obtain pure Hydrogen.

The Global Info Research report includes an overview of the development of the Methanol Cracking Plants industry chain, the market status of Chemicals Industry (
