Abstracts

The global Methanol Cracking Plants market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Methanol Cracking is an extremely useful technology being used to generate Hydrogen at a low cost. This is because Methanol is considered as a preferred raw material in view of its easy availability and storage features. In this process, methanol and demineralised water are mixed, preheated, evaporated, superheated. Then, the mixed superheated gasses undergo a catalytic process. After that, the present Carbon monoxide shifts to form a mixture of Hydrogen, Carbon dioxide, and other residues. Lastly, the mixture of gasses is transferred to the PSA section to obtain pure Hydrogen.

This report studies the global Methanol Cracking Plants production, demand, key manufacturers, and key regions.
