According to our (Global Info Research) latest study, the global Methanol Dual Fuel Engine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A methanol dual-fuel engine is an engine that uses the mixed combustion of methanol and another fuel such as gasoline, diesel or natural gas. Methanol is often referred to as a 'renewable energy fuel' because it can be obtained through sources such as biomass or waste recycling, and its production produces much lower greenhouse gas emissions than fossil fuels. Methanol dual-fuel engines can reduce vehicle emissions, improve fuel economy, and also extend engine life. However, methanol has a relatively low energy density and thus requires a large oil storage capacity.
