Abstracts

The global Methanol Dual Fuel Engine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A methanol dual-fuel engine is an engine that uses the mixed combustion of methanol and another fuel such as gasoline, diesel or natural gas. Methanol is often referred to as a 'renewable energy fuel' because it can be obtained through sources such as biomass or waste recycling, and its production produces much lower greenhouse gas emissions than fossil fuels. Methanol dual-fuel engines can reduce vehicle emissions, improve fuel economy, and also extend engine life. However, methanol has a relatively low energy density and thus requires a large oil storage capacity.

This report studies the global Methanol Dual Fuel Engine production, demand, key manufacturers, and key regions.
