According to our (Global Info Research) latest study, the global Methanol Fuel Cell Generator market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Methanol fuel cell generator is a power generation equipment that uses methanol as fuel. It is divided into direct methanol fuel cell power generation and reformed methanol fuel cell power generation (indirect methanol fuel cell). Direct methanol fuel cells directly use methanol as the anode active material; reformed methanol fuel cells first recombine methanol at high temperature to form hydrogen, or react at low temperature to form hydrocarbons.
