Abstracts

According to our (Global Info Research) latest study, the global Methanol-powered Vessel market size was valued at US\$ 336 million in 2025 and is forecast to a readjusted size of US\$ 572 million by 2032 with a CAGR of 6.8% during review period.

In 2025, global Methanol-powered Vessel approximately 89 units, with an average global market price of around US\$ 3.67 m per unit. Gross margin is about 44%. The cost is 2.06 m usd. The Production is about 200 units. Methanol-powered Vessel refers to a ship that uses methanol as a primary or alternative marine fuel to generate propulsion power through specially designed marine engines (typically dual-fuel or dedicated methanol engines). Methanol can be combusted in modified internal combustion engines or converted to electricity via fuel cells, producing significantly lower sulfur oxides (SOx), particulate matter (PM), and reduced lifecycle carbon emissions compared with conventional heavy fuel oil. Because methanol is liquid at ambient temperature and easier to store than LNG, it is considered one of the most practical transitional low-carbon fuels in maritime decarbonization.
