Methanol Ships are vessels powered by methanol, a clean alternative fuel that reduces emissions compared to conventional marine fuels. Methanol can be produced from renewable resources, making it a sustainable option for the maritime industry. These ships are designed to meet increasingly stringent environmental regulations, such as those set by the International Maritime Organization (IMO), to limit greenhouse gas emissions and pollutants like sulfur and nitrogen oxides. Methanol-fueled ships are seen as a key solution in the industry's transition toward greener shipping practices. In 2025, global Methanol Ships production reached approximately 36 units, with an average global market price of around \$107.5 million/unit. The production capacity for Methanol Ships in 2025 was approximately 40 units. The typical gross profit margin for Methanol Ships between 20% and 40%.
