## Abstracts

According to our (Global Info Research) latest study, the global Methanol to Formaldehyde Catalyst market size was valued at US\$ 242 million in 2025 and is forecast to a readjusted size of US\$ 330 million by 2032 with a CAGR of 4.6% during review period.

Methanol-to-formaldehyde catalysts are a class of specialized catalytic materials utilized in industrial formaldehyde plants to achieve the highly selective conversion of methanol into formaldehyde. These catalysts primarily fall into two major categories: silver-based catalysts and iron-molybdenum-based catalysts. Their core function is to enhance methanol conversion rates and formaldehyde selectivity—under specific conditions of temperature, gas composition, and reactor configuration—while simultaneously minimizing side reactions and energy consumption. Furthermore, they play a critical role in ensuring the long-term, stable operation of the production facility, serving as a key consumable within the formaldehyde production process package and reactor system.

The upstream segment of the industry primarily comprises raw materials supporting the methanol process, including silver, iron salts/molybdenum salts, molybdenum oxide, promoters, binders, and support materials; among these, the prices of silver and molybdenum sources exert a significant influence on overall production costs. The midstream segment consists of the catalyst manufacturing enterprises themselves, where core operational stages encompass the formulation of active component ratios, precipitation/impregnation, calcination, molding, screening, and the design of catalyst loading schemes, as well as ongoing operational support services. In 2025, the global sales volume for methanol-to-formaldehyde catalysts is projected to reach approximately 1,000 tons. Pricing for iron-molybdenum catalysts is estimated at around

\$60–100 per kilogram, while silver-based catalysts range from approximately \$1,400 to \$1,800 per kilogram; the industry's aggregate gross profit margin typically falls within the range of 15% to 30%.
