According to our (Global Info Research) latest study, the global Membrane Separation Systems market size was valued at USD 826.9 million in 2023 and is forecast to a readjusted size of USD 1222.3 million by 2030 with a CAGR of 5.7% during review period.

Membrane separation processes operate without heating and therefore use less energy than conventional thermal separation processes such as distillation, sublimation or crystallization. The separation process is purely physical and both fractions (permeate and retentate) can be used.

The global market for membrane separation systems is gaining from measures taken for water conservation and from adoption of technology for wastewater treatment for the essential commodity to last for successive generations. Municipal agencies and metropolitan planners in several countries are preparing for the impact in the event of water shortage which is an essential commodity. This is pushing the need for innovations in water treatment technologies, which in turn, is stoking demand for membrane separation systems.
