Abstracts

The global Methyl 2-benzoylbenzoate market size is expected to reach \$ 53.90 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of methyl 2-benzoylbenzoate was approximately 1,360 tons, with an average global market price of around USD 25/kg. The gross margin of major industry producers was generally in the range of 25%–40%. Methyl 2-benzoylbenzoate is a benzophenone-derivative photoinitiator. At room temperature, the product is typically a white to pale yellow crystalline solid or powder. It is mainly used as a Type II free-radical photoinitiator in UV-curable systems, where it can work together with amine synergists to initiate rapid curing of acrylate resin systems under ultraviolet irradiation. It features low odor, low yellowing and good suitability for surface curing. Its upstream raw materials mainly include 2-benzoylbenzoic acid, methanol, esterification reagents, solvents, catalysts and purification auxiliaries. The midstream stage involves the synthesis, crystallization, purification, drying, milling and quality control of methyl 2-benzoylbenzoate. Downstream applications are mainly concentrated in UV-curable materials, pharmaceutical intermediates, photoresists and other fields. Overall, the product is a specialty photoinitiator in the UV-curable materials value chain, and its market demand is closely related to the penetration of UV-curing technology in printing and packaging, industrial coatings and environmentally friendly coatings.
