Abstracts

The global Methyl Cedryl Ketone market size is expected to reach \$ 172 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

In 2025, global Methyl Cedryl Ketone production reached approximately 6,792 tons, with an average global market price of around US\$17,360 per ton. Methyl Cedryl Ketone is also called Acetyl Cedrene. It is a colorless liquid with a strong woody odor. Methyl Cedryl Ketone is prepared by the ethyl esterification of alpha-cedrene. It is widely used in fragrance formulation, such as in the fragrance of perfumes, soaps, and cosmetics.

The global market for methyl cedryl ketone features a highly concentrated supply landscape, with China hosting the majority of production capacity. Market growth is primarily driven by demand from the fine fragrance and personal care sectors. As consumers increasingly prefer long-lasting, high-quality scents, methyl cedryl ketone continues to secure its position in perfumes, cosmetics, and soaps, supported by its strong amber-musk character and excellent fixative properties. The steady expansion of the global flavors and fragrances market, particularly in perfumes and air fresheners, provides a solid foundation for further application of this aroma chemical.

Nevertheless, several challenges persist. The upstream raw material supply depends on cedarwood oil and cedrene extraction, raising concerns about the sustainability of natural cedar resources and potential price volatility. Additionally, tightening global environmental regulations require cleaner production processes, placing higher technical demands on manufacturers. In summary, the methyl cedryl ketone market is expected to maintain steady growth, supported by its distinctive functional role and stable downstream demand. However, sustainable raw material management and rising

compliance costs will be critical factors shaping its long-term trajectory.
