## Abstracts

The global Methyl Perfluorobutyrate market size is expected to reach \$ 39.92 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

Methyl perfluorobutyrate is a fluorinated carboxylic ester—the methyl ester of perfluorobutyric acid. It is typically supplied as a colorless, volatile liquid. Its molecular formula is  $C_4H_7F_7O_2$ , and it commonly exists as a colorless, volatile liquid with a boiling point at standard pressure of approximately 353 K (approximately 80–81 °C).

Upstream, it is most commonly prepared by direct esterification of perfluorobutyric acid with excess methanol under strong-acid catalysis. Downstream, it is mainly used as a fluorinated building block/intermediate: the ester group can be further transformed (e.g., to acids, amides, other derivatives) in organic synthesis, and it is also used as an analytical reference compound thanks to well-established spectral and gas-chromatographic datasets.

In 2025, global sales of methyl perfluorobutyrate reached approximately 279 tons, with an average global market price of around US\$ 90/kg. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 25% to 45%.

This report studies the global Methyl Perfluorobutyrate production, demand, key manufacturers, and key regions.
