According to our (Global Info Research) latest study, the global Methylamine market size was valued at USD 1738.6 million in 2023 and is forecast to a readjusted size of USD 2147.4 million by 2030 with a CAGR of 3.1% during review period.

Methylamine is an organic compound with a formula of CH_3NH_2 . This colorless gas is a derivative of ammonia, but with one hydrogen atom being replaced by a methyl group. It is the simplest primary amine. It is sold as a solution in methanol, ethanol, tetrahydrofuran, or water, or as the anhydrous gas in pressurized metal containers. Industrially, methylamine is transported in its anhydrous form in pressurized railcars and tank trailers. It has a strong odor similar to fish. Methylamine is used as a building block for the synthesis of many other commercially available compounds. Generally speaking, there are two forms of methylamine: gas and liquid. In our report, gas will be turned into the form of liquid when calculated. That's to say, we do research based on that 1 MT gas type methylamine is equal to 2 MT liquid type methylamine.

In North America, Methylamine key players include Eastman, Chemours, BASF, etc. The top three players hold a share about 95%.

USA is the largest market, with a share about 95%, followed by Mexico and America, having a total share about 5 percent.

In terms of product, Liquid is the largest segment, with a share about 80%. And in terms of application, the largest application is N-methylpyrrolidone, followed by Pesticides, Alkylalkanolamines, Pharmaceuticals, etc.

The Global Info Research report includes an overview of the development of the
