According to our (Global Info Research) latest study, the global Methylation Analysis market size was valued at US\$ 537 million in 2024 and is forecast to a readjusted size of USD 719 million by 2031 with a CAGR of 4.3% during review period.

Over the past few decades, the continuous development of genome-wide DNA methylation analysis techniques has improved our understanding of various aspects of genomic DNA methylation in health and disease. We are witnessing a large amount of sequenced epigenetic data (not only DNA methylation). Nanopore-based third-generation sequencing platforms offer great potential for direct sequencing of 5mC at the single-molecule level, and now new challenges in the development of DNA methylation have shifted from big data generation to data analysis.
