The surface plate is simply a big flat rock. Designed stiff and massive to not distort, nice and hard to limit wear, and flat, so we can use it as the reference in measurement. A typical measurement on a surface plate involves something like this height gage, where either the part or the gage moves around on the plate.

The Metrology Surface Plates market is expected to show significant growth in the coming years. Metrology surface plates are large, flat plates that are used as a reference surface for measuring, inspecting, and verifying the accuracy of various objects and instruments in industries such as manufacturing, automotive, aerospace, and construction. The Metrology Surface Plates market is expected to witness significant growth in the coming years driven by the increasing demand for accuracy and precision in measurement processes, technological advancements in manufacturing, growing adoption of metrology and inspection services, and expanding applications in emerging industries.
