Abstracts

According to our (Global Info Research) latest study, the global Mezzanine Modules market size was valued at US\$ 1815 million in 2024 and is forecast to a readjusted size of USD 2341 million by 2031 with a CAGR of 3.6% during review period.

Mezzanine modules are small, modular circuit boards that mount onto a larger host board (often called a carrier or baseboard) to add specific functionality—such as processing, memory, I/O interfaces, or communication capabilities—without redesigning the entire system. These modules are commonly used in embedded systems, industrial automation, telecommunications, and military applications, allowing for compact, flexible, and easily upgradeable system designs. They often conform to standardized form factors like PMC (PCI Mezzanine Card), XMC (Switched Mezzanine Card), or FMC (FPGA Mezzanine Card), ensuring interoperability and ease of integration.
