Abstracts

According to our (Global Info Research) latest study, the global Mica Capacitors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The term “Mica” is a collection of natural minerals. Silver mica capacitor is a capacitor that uses the name mica as the dielectric. These capacitors are classified into two types, namely silver mica capacitor and damped mica capacitor. Silver mica capacitors are used in its place of clamped mica due to their lower characteristics. Generally, mica capacitors are low loss capacitors which are used where the high frequency is required and their value doesn't change much over time. These capacitors are constant chemically, mechanically and electrically due to its particular crystalline structure (typical layered structure). This creates it achievable to produce thin sheets in the order of 0.025-0.125 mm. The most frequently used micas are Phlogopite mica and Muscovite mica. The high difference in raw material work leads to high cost required for check & sorting. Mica doesn't respond with most acids, oil, water and solvents.

Global mica capacitors market is anticipated to grow at a higher CAGR in the forecast period owing to growth in commercial uses of capacitors. Mica capacitors industry is driven by factors such as need for high precision, stability and reliable capacitor in circuits. Additionally, the need for sophisticated chip set for computer and TV motherboards is expected to propel the market growth in the forecast period. Europe and North American market is expected to rise at a higher CAGR owing to proliferated use of mica capacitors for chipsets.
